INTRODUCTION

UK

Aware of being the leader.

Brembo has always stood for technical excellence: this fact makes us global leaders in braking systems for cars, motorcycles and commercial vehicles. For more than 50 years, we have been installing our systems on the most prestigious cars and motorcycles and we are a trusted companion of the greatest drivers and riders in their thrilling adventures. We have shared victory in over 200 world championships by their side. On all levels, our goal is always to further past achievements and seek out new challenges. This is the reason why the Brembo Group, whose staff is formed by 10% of specialized engineers and technicians, invests heavily in Research & Development.

From the hatching concept to the final brake on the tar-mat: we closely monitor all the steps that lead to the manufacture of each single component of the braking system. R&D, testing, production and assembly, quality control and distribution, without forgetting customer service: close monitoring of the value chain from start to finish is a guiding principle of our philosophy.

We carry out all manufacturing processes in-house, as it should be for a Group that is aware of its leadership in the industry. We think of ourselves as one big team that, besides focusing on product quality, also dedicates its attention to performance, comfort and driving safety.

Every new product, every article that we add to our offer is a new success, the fruit of hard work and passion born out of computerized simulations and that ends with market placement, after having brilliantly passed the most stringent of quality tests.

I

La consapevolezza di essere leader.

Da sempre, Brembo è sinonimo di eccellenza tecnica: per questo siamo leader mondiali dei sistemi frenanti per auto, moto e veicoli commerciali.

Da oltre 50 anni equipaggiamo le automobili e le moto più prestigiose e accompagniamo i più grandi piloti nelle loro emozionanti avventure: con loro abbiamo vinto oltre 200 campionati mondiali.

In ogni settore il nostro obiettivo è sempre stato quello di superare i traguardi raggiunti e cercare nuove sfide. Per questo, il Gruppo Brembo, formato per il 10% da ingegneri e tecnici specializzati, dedica al settore R&D (Ricerca e Sviluppo) una quota crescente di investimenti.

Dall'idea che prende forma alla frenata al termine del rettilineo: tutte le fasi che portano alla realizzazione di ogni singolo elemento dell'impianto frenante sono scrupolosamente monitorate. Ricerca e design, sviluppo e test, produzione e assemblaggio, controllo della qualità e distribuzione, senza dimenticare l'assistenza: è il controllo della catena del valore un punto fermo della nostra filosofia.

Tutto il processo produttivo si svolge al nostro interno, come deve essere per un Gruppo consapevole di essere leader del proprio settore. Ci consideriamo un unico grande team che, oltre alla qualità dei propri prodotti, pone la massima attenzione anche alle prestazioni, al comfort e alla sicurezza di guida.

Ogni nuovo prodotto, ogni articolo che aggiungiamo alla nostra gamma è un nuovo successo, frutto di un severo e appassionante processo che nasce dalle simulazioni computerizzate e si conclude con la diffusione al mercato, dopo aver superato brillantemente tutti i più rigorosi test qualitativi.

**F**

La conscience d'être un leader.

Brembo est depuis toujours synonyme d'excellence technique : c'est la raison pour laquelle nous sommes le leader mondial des systèmes de freinage pour voitures, motos et véhicules utilitaires.

Depuis plus de 50 ans, nous équipons les voitures et les motos les plus prestigieuses et nous accompagnons les plus grands pilotes dans leurs passionnantes aventures : nous avons gagné avec eux plus de 200 championnats du monde.

Quel que soit le domaine, notre objectif a toujours été d'aller au-delà des objectifs atteints et de relever de nouveaux défis. C'est pourquoi le Groupe Brembo, formé à 10% d'ingénieurs et de techniciens spécialisés, réserve au secteur R&D (Recherche et Développement) une part croissante d'investissements.

De l'idée qui prend forme jusqu'au freinage au bout de la ligne droite : toutes les phases permettant de réaliser chaque élément du système de freinage sont scrupuleusement contrôlées. Recherche et design, développement et essais, fabrication et assemblage, contrôle de la qualité et distribution, sans oublier l'assistance : le contrôle de la chaîne de valeur est un point clé de notre philosophie.

Tout le processus de production se déroule au sein de l'entreprise, une condition sine qua non pour un Groupe conscient d'être le leader de son secteur. Nous nous considérons comme une seule grande équipe qui réserve le maximum d'attention non seulement à la qualité de ses produits, mais aussi aux performances, au confort et à la sécurité au volant.

Tout nouveau produit, tout article que nous ajoutons à notre gamme est un nouveau succès, fruit d'un processus à la fois rigoureux et passionnant, qui naît des simulations informatisées et s'achève par la diffusion sur le marché, après avoir brillamment passé tous les tests qualitatifs les plus sévères.

INTRODUCTION

D

Das Bewusstsein Marktführer zu sein.

Bei Brembo steht technische Exzellenz seit jeher im Mittelpunkt: Es darf also nicht verwundern, dass wir Weltmarktführer bei Bremsanlagen für PKW, Motorräder und Nutzfahrzeuge sind.

Seit über 50 Jahren statten wir die renommiertesten Automobil- und Motorradmarken aus und begleiten die besten Fahrer bei ihren sensationellen Unternehmungen: gemeinsam mit ihnen haben wir über 200 Weltmeisterschaften gewonnen.

In jedem Bereich sind wir darauf fokussiert, über die erreichten Zielsetzungen hinaus neue Herausforderungen anzustreben.

Deshalb investiert die Brembo Gruppe, die zu 10 % aus Fachingenieuren und

technischen Spezialisten besteht, einen wachsenden Anteil ihres Kapitals in die Forschung und Entwicklung.

Von der Idee, die Form

annimmt, bis zum Bremsmanöver am Ende der Geraden: Alle Phasen, die zum Entstehen jedes einzelnen Elements der Bremsanlage führen, werden genauestens überwacht. Forschung und Design, Entwicklung und Tests, Produktion und Montage, Qualitäts- und Vertriebskontrolle, nicht zu vergessen der Kundendienst: Die Kontrolle der Wertschöpfungskette ist ein Fixpunkt unserer Philosophie.

Der gesamte Produktionsprozess erfolgt werksintern, wie es bei einer Gruppe sein muss, die sich dessen bewusst ist, Marktführer des eigenen Wirtschaftszweigs zu sein. Wir sind ein einzigartiges, großartiges Team, das nicht nur größten Wert auf die Qualität seiner Produkte, sondern auch auf die Leistung, den Komfort und die Fahrsicherheit legt.

Jedes neue Produkt, jeder neue Artikel unseres Angebots stellt ein neues Erfolgsmoment im Rahmen eines ebenso strengen wie anregenden Prozesses dar, der bei komplexen Computersimulationen ansetzt und nach Erfüllung akkurater Qualitätstests mit der Vermarktung endet.

E La conciencia de ser líder.

Brembo desde siempre es sinónimo de excelencia técnica: por esto somos líderes mundiales de sistemas de frenos para automóvil, moto y vehículos comerciales. Llevamos más de 50 años equipando las motos y los automóviles más prestigiosos y acompañando a los mejores pilotos en sus aventuras emocionantes: con ellos hemos ganado más de 200 campeonatos mundiales.

En todos los sectores nuestro objetivo es siempre lograr las metas y buscar nuevos desafíos. Por esto el Grupo Brembo, un 10% del cual está conformado por ingenieros y técnicos especializados, dedica al sector de I&D (Investigación y Desarrollo) una cuota creciente de inversiones.

Desde la idea que va concretándose hasta la frenada al final de la recta: todas las fases que llevan a realizar cada uno de los elementos del sistema de frenos han sido cuidadosamente controladas. Investigación y diseño, desarrollo y pruebas, producción y ensamble, control de calidad y distribución, sin descuidar el servicio técnico: un punto firme de nuestra filosofía empresarial es el control de la cadena de valor.

Todo el proceso productivo lo realizamos en nuestras propias instalaciones, como debe ser para un Grupo consciente de ser líder de su sector. Nos consideramos un único grande equipo que, además de la calidad de sus productos, dedica la máxima atención también a las prestaciones, al confort y a la seguridad a la hora de conducir.

Cada nuevo producto, cada artículo que añadimos a nuestra gama es un nuevo éxito, resultado de un proceso severo y apasionante que empieza por las simulaciones informáticas y termina con la puesta en comercio, después de haber pasado sobresalientemente todas las pruebas de calidad más rigurosas.

GENERAL INFORMATION

Il segreto di una frenata sicura sta anche nelle pastiglie

Brembo, leader mondiale dei freni, integra la propria offerta con una gamma completa di pastiglie ad elevate prestazioni, risultato di una tecnologia d'avanguardia volta a migliorare la sicurezza dell'intero sistema frenante. Con un'ampia varietà di mescole, dalle sinterizzate alle carbon-ceramiche, e un elevatissimo numero di codici prodotto, Brembo soddisfa le specifiche esigenze di tutti i tipi di moto – da competizione, strada, città, off-road – e le aspettative di tutti i piloti. Le mescole normalmente utilizzate negli impianti frenanti sono classificabili in due sole famiglie, ORGANICHE e SINTERIZZATE e l'impiego di un tipo piuttosto che l'altro non è assolutamente legato all'utilizzo: esistono infatti pastiglie freno di diversa tipologia nel medesimo campo di utenza.

Materiali sinterizzati

Sono composti di polveri metalliche, con aggiunte di lubrificanti ed abrasivi che vengono agglomerati tra loro attraverso un processo con pressione e temperature elevate. La mescola si fissa al supporto metallico della forma voluta durante il processo di sinterizzazione senza aggiunta di alcun collante. Le polveri metalliche determinano quanto frena la pastiglia e quanto è stabile a temperature elevate; i lubrificanti concorrono nella stabilità complessiva della frenata, gli abrasivi tengono puliti i dischi.

Scelta della mescola

Le pastiglie hanno un loro campo d'applicazione. Questo dipende dalle diverse situazioni che una pastiglia freno deve affrontare: racing – privilegia la frenata ad alte temperature, strada – elevata stabilità, frenate a freddo e a medie temperature. Brembo ha una risposta per ogni esigenza.

Rodaggio

È importantissimo per tutte le mescole e addirittura fondamentale per la mescola RC. Questa operazione si completa effettuando una serie di frenate leggere, lasciando tempo tra una e l'altra. Si compie così un corretto ciclo termico di riscaldamento e raffreddamento dell'impianto. Il periodo di rodaggio dipende dal tipo di mescola: rodaggio più lungo per le organiche rispetto alle sinterizzate.

Le prestazioni delle mescole, molto diverse tra loro, sono descritte attraverso i seguenti parametri: l'efficienza (cioè quanto la pastiglia frena) viene espressa attraverso il coefficiente d'attrito medio e la stabilità dell'attrito alle principali grandezze che caratterizzano la frenata (velocità, decelerazione, temperatura). Viene rilevata attraverso opportune prove al banco e su veicolo.

L'usura: è espressa come la quantità di materiale d'attrito usurato (in mm. di spessore oppure in volume) rispetto al numero di frenate effettuate (banco) oppure di Km. percorsi (veicolo). Le differenze funzionali tra le varie mescole si possono riassumere osservando i grafici proposti, relativi al coefficiente d'attrito in funzione della temperatura d'esercizio: si nota che la mescola RC (organico Racing, pag.12) dove 350 – 450°C. di temperatura d'esercizio possono essere considerati condizioni normali, possiede un coefficiente d'attrito a caldo molto elevato, mentre le mescole stradali (come appunto è la SA sinterizzato stradale, pag.13) sono progettate per funzionare al meglio a medie/basse temperature, e precisamente attorno ai 300°C.

Quindi queste ultime, se utilizzate in pista e quindi sollecitate oltre misura, risentiranno dell'effetto di "fading" e cioè il degrado del coefficiente d'attrito: infatti, oltre una certa temperatura, tenderanno a perdere efficienza. Al contrario, utilizzando mescole Racing su strada (e quindi con i dischi freddi), il grip non sarà così buono e si potrà avere la frenata un po' lunga. Le mescole intermedie sono naturalmente un compromesso tra queste situazioni descritte, forniranno prestazioni buone in tutte le condizioni pur non eccellendo ai due capi estremi del range di temperatura d'esercizio.

The secret of safe braking has a lot to do with pads

Brembo, a world leading name in brakes, expands its catalogue with a full range of high performance pads incorporating vanguard technology designed to improve the safety of the entire braking system. Offering a wide variety of compounds, from sintered to carbon-ceramic, and a big selection of part numbers, Brembo is able to satisfy specific needs presented by motorcycles of every kind – racing, road, off-road, street and scooter – not to mention the expectations of their riders. The compounds used normally in braking systems are classifiable in just two families, ORGANIC and SINTERED, although the choice of one compound over another is not dependent solely on the type of use: in effect, pads of different type can be used in the same field of application.

Sintered materials

These are metallic powders, mixed with lubricants and abrasive agents in such a way as to produce a compound that is solidified by compacting even at high temperatures. The compound is bonded to a metal backing plate of whatever shape as part of the sintering process, with no additional adhesive utilized.

The metal powders determine the braking power of the pad at high temperatures. The lubricants help to stabilize the overall braking action, and the abrasives keep the discs clean.

Organic materials

These are composed mainly of resin binders, metals, lubricants and abrasives. In this instance the friction coefficient is generated by the metals and the resins, with the lubricants and abrasives performing the functions as mentioned above.

Selecting a compound

All brake pads have a typical field of application. This will depend on the different situations a brake pad has to deal with:

racing – braking is optimized at high temperatures, road – high stability required, with brakes applied cold and at medium temperatures.

Brembo has an answer to every need.

Bedding-in

This is a particularly important procedure for all compounds, and crucial for the RC compound. The pads are bedded in by applying the brakes lightly several times, leaving a pause between one squeeze and the next. This will produce the correct heating and cooling cycle needed to prepare the system. The duration of the bedding-in period depends on the type of compound: generally longer for organic compounds than for sintered.

Performance-wise, the two compounds differ significantly, as reflected in the following parameters:

Efficiency (how well the pad bites): this is an expression of average friction coefficient, and stability of frictional contact, measured against the main physical quantities by which braking is defined (speed, deceleration, temperature). It is determined via tests conducted on the bench, and on the vehicle.

Wear: this indicates the amount of friction material removed (expressed as mm thickness, or by volume) per number of brake applications (bench test) or number of km covered (vehicle). The functional differences between the various compounds are represented by the curves in the graphs that will follow, which illustrate friction coefficient versus operating temperature: it will be seen that the RC compound (Racing organic, page 12) for which temperatures of 350 – 450°C can be considered as reflecting normal operating conditions, has a very high friction coefficient when hot, where as road type compounds like the SA (sintered, for road use, page 13) are designed to perform best at medium/low temperatures, typically around 300 °C. This means that if SA type pads were to be used on the track, and therefore overstressed, the brakes would inevitably fade (degradation of the friction coefficient): in effect, beyond a certain temperature, the pads will lose efficiency. Conversely, if Racing compounds are used on the road (with much colder discs), they will give less bite, and braking distances could be somewhat longer. Intermediate compounds, self-evidently, represent a compromise between the two basic types and will provide good overall performance in most conditions, albeit with less brilliance at the opposite extremes of the operating temperature range.

GENERAL INFORMATION

Le secret d'un freinage sûr et efficace réside aussi dans les plaquettes de frein.

Brembo, leader mondial des systèmes de freinage, étoffe son offre avec une gamme complète de plaquettes de frein hautes performances, expressément développée pour améliorer la sécurité intrinsèque du système de freinage grâce aux avancées technologiques mises en oeuvre. La gamme BREMBO propose une très large variété de matériel de friction allant de la plaquette sintérisée à la carbon-céramic (mélange de carbone et céramique) et satisfait tous types de disciplines (racing, route, off- road ...) et toutes les exigences des utilisateurs.

Il n'existe pas une moto, un contexte de roulage unique, un besoin. Chaque moto a des caractéristiques différentes, tout comme chaque parcours et chaque individu. BREMBO propose donc 2 familles de matériel de friction: les sintérisées (métal frittée), et les organiques (carbon céramic). Ces familles de matériel de friction sont disponibles en 4 version: compétition, route, tout terrain et scooter.

Métal fritté (sinter)

Eles sont composées de poudres métalliques et additionnées de lubrifiants et d'abrasifs, le tout étant aggloméré à haute température/ pression. Le mélange, ainsi réalisé, se fixe au support métallique de la forme désirée pendant le procédé de frittage sans aucun ajout d'adhésif. Les poudres métalliques déterminent l'efficacité de freinage de la plaquette et la longévité, les lubrifiants participent à la stabilité du freinage et les abrasifs maintiennent propres les disques.

Organiques

Elles sont principalement composées de résines liantes, métaux, lubrifiants et abrasifs. Dans ce cas, le coefficient de frottement est généré par les métaux et les résines, alors que les lubrifiants et les abrasifs jouent ici aussi le même rôle que pour les plaquettes décrites plus haut.

Choix du matériel de friction

Les plaquettes ont leur propre utilisation. Cela dépend évidemment des différentes qualités proposées (c'est à dire du type d'usage que l'on souhaite en faire): les racing – elles ne sont vraiment efficaces que lorsqu'elles sont (très) chaudes; les routes – elles assurent une haute stabilité pour des freinages à froid et à températures moyennes. Les plaquettes de frein Brembo couvrent toutes les utilisations.

Rodage

C'est une phase très importante pour toutes les plaquettes, voire fondamentale pour les RC. Le rodage doit se faire en effectuant de petits freinages répétés et en douceur, sans oublier de laisser s'écouler un certains laps de temps entre deux séries. Ceci pour laisser le temps aux plaquettes de bien s'ajuster aux disques (le cycle thermique de chauffage et de refroidissement sera ainsi correctement réalisé). La période de rodage dépend du type de plaquette: les organiques réclament un rodage plus long que les plaquettes réalisées en matière sintérisée.

Les performances des différentes qualités, extrêmement diverses entre elles, sont déterminées par les paramètres suivants: Efficacité: ce critère est exprimé par le coefficient de frottement moyen et par la stabilité du frottement aux différentes grandeurs qui définissent le freinage (vitesse, décélération, température). Ce paramètre est mesuré par des essais au banc et sur moto en conditions réels. Usure: ce paramètre est exprimé par la quantité de matériau usé (la garniture) (en mm d'épaisseur ou en volume) par rapport au nombre de freinages effectués (au banc) ou de kilomètres parcourus (machine). Les différences de fonctionnement entre les différentes qualités de plaquettes (constituants mélangés) peuvent se résumer à travers les graphiques aux pages suivantes relatifs au coefficient de frottement en fonction de la température de fonctionnement: noter que les RC (Racing Carbone organique, page 12) pour lesquelles une température d'utilisation comprise entre 350 – 450°C peut être considérée comme normale, ont un coefficient de frottement à chaud très élevé, tandis que les plaquettes route (comme par exemple les SA matériau fritté route, page 13) ont été conçues pour fonctionner au mieux à des températures moyennes/ basses, et précisément aux alentours de 300°C. En conséquence, si ces plaquettes sont utilisées en piste et donc sollicitées outre mesure, elles ressentiront les effets du "fading", à savoir la dégradation du coefficient de frottement. En pratique, elles tendront à devenir moins efficaces au-delà d'une certaine température de fonctionnement. Au contraire, les plaquettes racing utilisées sur route (et donc avec des disques froids) seront moins efficaces, avec à la clé des freinages rallongés. Les plaquettes intermédiaires sont naturellement des compromis entre les qualités décrites plus haut; elles fourniront de bonnes performances en toutes conditions sans pour autant être pas excellentes aux deux extrémités de leur gamme de température de fonctionnement.

Das Geheimnis des sicheren Bremsens liegt auch in den Bremsbelägen

Brembo, Weltmarktführer für Bremssysteme, hat seine Produktpalette um ein vollständiges Programm an Hochleistungs-Bremsbelägen erweitert, die das Ergebnis wegweisender Technologie sind, mit der das Ziel der ständigen Verbesserung der Sicherheit des gesamten Bremssystems verfolgt wird. Dank der reichen Auswahl an Belagmischungen, von Sinter- bis zu Carbon-Keramik-Mischungen, und der nahezu kompletten Anwendungsliste ist Brembo in der Lage, die spezifischen Anforderungen aller Arten von Motorrädern - von Racing-, Road- und Off-Road-Motorrädern bis hin zu Scootern - sowie die Ansprüche aller Fahrer zu erfüllen. Bei den üblicherweise in Bremsanlagen verwendeten Belägen lassen sich zwei Typen unterscheiden, ORGANISCHE BELÄGE und SINTERBELÄGE. Die Verwendung dieser beiden Typen ist jedoch nicht einsatzgebunden: so können verschiedene Bremsbelagtypen ohne weiteres für denselben Anwendungsbereich eingesetzt werden.

Sintermischungen

Sie bestehen aus Metallanteilen, die mit Schmierstoffen und Schleifmitteln vermischt und bei sehr hohen Temperaturen miteinander verpresst werden. Die Mischung wird während der Sinterung ohne Verwendung von Klebstoffen auf einer Trägerplatte mit der gewünschten Form fixiert. Die Metallanteile bestimmen den Reibwert des Bremsbelags, die Schmierstoffe tragen zur Bremsstabilität bei und die Schleifmittel halten die Bremsscheiben sauber.

Organische Mischungen

Sie bestehen hauptsächlich aus Harz als Bindemittel, Metallen, Schmierstoffen und Schleifmitteln. In diesem Fall wird der Reibwert durch die Metalle und Harze erzeugt, während die Schmierstoffe und Schleifmittel den o.a. Zweck erfüllen.

Wahl der Mischung

Bremsbeläge haben ihren idealen Anwendungsbereich, der von den unterschiedlichen Situationen abhängt, in denen der Bremsbelag verwendet wird: Racing - Fokus auf höchste Bremsleistung bei hohen Temperaturen, Road - Fokus auf hohe Bremsstabilität bei Bremsungen vom Start an bzw. bei Bremsungen bei mittleren Temperaturen. Brembo hat die richtige Antwort für jede Anforderung.

Einfahren

Alle Mischungen erfordern sorgfältiges Einfahren, dies gilt jedoch besonders für die Mischung RC. Dieser Vorgang besteht aus mehreren Bremsungen mit leichtem Druck sowie Kühlphasen zwischen den einzelnen Bremsungen. Auf diese Weise wird ein korrekter thermischer Erwärmungs- und Abkühlungszyklus der Bremsanlage durchgeführt. Die Einfahrzeit hängt von der Belagmischung ab: organische Beläge müssen länger eingefahren werden als Sinterbeläge.

Die stark voneinander abweichenden Bremseigenschaften der verschiedenen Mischungen werden durch die folgenden Parameter definiert: Bremswirkung (d.h. wie stark der Bremsbelag verzögert): diese wird durch den mittleren Reibwert und die Reibwertkonstanz bei den wichtigsten Größen, welche die Bremsung bestimmen (Geschwindigkeit, Verzögerung, Betriebstemperatur), definiert. Sie wird am Bremsprüfstand und in Fahrversuchen am Fahrzeug ermittelt. Verschleiß: dieser entspricht dem verbrauchten Reibmaterial (in mm Stärke oder in Volumen) im Verhältnis zur Anzahl der (am Bremsprüfstand) durchgeführten Bremsungen oder zur Kilometerleistung (Fahrzeug). Die funktionellen Unterschiede zwischen den verschiedenen Mischungen stellen sich in den Grafiken als Reibwert im Verhältnis zur Betriebstemperatur dar: die Mischung RC (Racing/Organisch, Seite 12) bei der denen 350-450°C Betriebstemperatur als normale Bedingung angesehen werden kann, besitzt einen sehr hohen Reibwert bei hohen Betriebstemperaturen, während die Mischungen für den Straßeneinsatz (wie die SA Sinter/Straße, Seite 13) sich am besten zum Einsatz bei niedrigen/mittleren Temperaturen, genauer gesagt bei etwa 300°C, eignen. Das bedeutet, dass diese Mischungen, falls sie auf der Rennstrecke eingesetzt und damit über Gebühr beansprucht werden, von starkem Fading, d.h. Reibwertverlust betroffen sind und oberhalb einer gewissen Temperatur zunehmend an Bremswirkung einbüßen. Umgekehrt kann sich beim Einsatz von Racing-Mischungen auf der Straße (also bei vorwiegend kalten Bremsscheiben) kein hoher Reibwert aufbauen, wodurch sich der Bremsweg verlängert. Die mittleren Mischungen stellen natürlich stets einen Kompromiss für die beschriebenen Situationen dar, d.h. sie bieten gute Leistungen über einen breiten Anwendungsbereich, fallen jedoch bei den Betriebstemperatur-Extremen (kalt/heiß) etwas ab.

GENERAL INFORMATION

El secreto de una frenada segura son también las pastillas

Brembo, líder mundial en sistemas de freno, amplía su oferta con una gama completa de pastillas de elevadas prestaciones que son el resultado de una tecnología de vanguardia dirigida a mejorar la seguridad de todo el sistema de freno. Con una amplia variedad de compuestos, sinterizados o Carbon-cerámicos, y un elevado número de códigos de producto, Brembo satisface las exigencias específicas de todo tipo de moto – competición, carretera, ciudad, motocross– y las expectativas de cualquier piloto.

Los compuestos que suelen utilizarse en www.brembo.com los sistemas de freno pueden agruparse en dos familias, ORGÁNICOS Y SINTERIZADOS y la elección de un tipo u otro no depende de su modalidad de utilización; de hecho, existen distintos tipos de pastillas de freno para un mismo segmento de usuarios.

Materiales sinterizados

Están compuestos por polvos metálicos, a los que se agregan lubricantes y abrasivos aglomerados mediante un proceso de presión a altas temperaturas. El compuesto se adhiere al soporte metálico, en función de la forma deseada, durante el proceso de sinterización sin necesidad de añadir ningún tipo de cola. Los polvos metálicos determinan la capacidad de frenado de la pastilla, los lubricantes optimizan la estabilidad de frenada y los abrasivos mantienen limpios los discos.

Materiales Orgánicos

Están compuestos principalmente por resinas, metales, lubricantes y abrasivos. En este caso, el coeficiente de fricción está determinado por los metales y las resinas, mientras que los lubricantes y los abrasivos actúan como arriba descrito.

Elección del compuesto

Cada pastilla posee su propio segmento de aplicación. Éste depende de las distintas situaciones a las que se somete una pastilla de freno: Racing – privilegia frenadas a altas temperaturas, Road – elevada estabilidad, frenadas en frío y a temperaturas medias. Brembo responde a todo tipo de exigencia.

Rodaje

Es importantísimo para todos los compuestos y fundamental para el RC. Esta operación se completa efectuando una serie de frenadas suaves, dejando pasar algo de tiempo entre una y otra. Con ello se logra un correcto ciclo térmico de calentamiento y refrigeración del sistema. El periodo de rodaje depende del tipo de compuesto: el rodaje de los compuestos orgánicos es más largo que el de los sinterizados.

Las prestaciones de los compuestos, tan distintos entre sí, se describen mediante los siguientes parámetros: Eficiencia (es decir, cuánto frena la pastilla): se expresa con el coeficiente de fricción medio y la estabilidad del rozamiento con relación a las principales magnitudes que caracterizan la frenada (velocidad, desaceleración, temperatura). Se mide mediante ensayos realizados en banco de pruebas y sobre el vehículo. Desgaste: se expresa en cantidad de material de rozamiento desgastado (mm de espesor o volumen) con respecto al número de frenadas efectuadas (banco) o de kilómetros recorridos (vehículo). Las diferencias funcionales entre los distintos compuestos se pueden ver en los gráficos relativos al coeficiente de fricción en función de la temperatura de ejercicio: el compuesto RC (orgánico Racing, página 12) donde 350 – 400 °C de temperatura de servicio se pueden considerar condiciones normales posee un coeficiente de fricción en caliente muy alto, mientras los compuestos de carretera (como por ejemplo el SA sinterizado de carretera, página 13) han sido diseñados para ofrecer el máximo rendimiento a medias y bajas temperaturas, en especial, a 250 °C aproximadamente. Cuando éstos últimos se utilizan en pista, sometidos a un esfuerzo excesivo, se produce el denominado efecto “fading” es decir, el deterioro del coeficiente de fricción; de hecho, por encima de cierta temperatura, tienden a perder eficiencia. Por el contrario, si se utilizan los compuestos Racing en carretera (es decir, con discos fríos), se pierde adherencia y la frenada es más larga.

Los compuestos intermedios son, naturalmente, una vía intermedia entre las situaciones descritas y ofrecen buenas prestaciones siempre que no se alcancen los límites del rango de temperatura de servicio.

RACING COMPOUND

RC – SC

Queste pastiglie sono state studiate per garantire ai loro utilizzatori prestazioni eccezionali. Le principali caratteristiche di questo tipo di materiali sono l'elevato attrito e la costanza di rendimento soprattutto con temperature del disco elevate. Tali caratteristiche garantiscono una frenata eccellente e uniforme per l'intera durata della competizione, rendendo meno probabile il manifestarsi dell'effetto fading. Per tale motivo l'efficienza alle basse temperature assume un'importanza inferiore.

- **RC:** miscela solo uso pista. Vera pastiglia racing indicata per qualsiasi tipo di competizione su pista. Eccellente coefficiente d'attrito a caldo e soprattutto eccezionale stabilità alle alte temperature in grado di mantenere la frenata costante dal primo all'ultimo giro..
- **SC:** miscela sinterizzata per uso pista/strada, con elevato coefficiente d'attrito a caldo. Materiale molto stabile in tutte le condizioni d'utilizzo. Il suo buon coefficiente d'attrito a freddo rende possibile l'utilizzo stradale di questo materiale.

RC – SC

These pads have been designed to guarantee their users exceptional performance. Materials of this type are notable mainly for their high friction coefficient and constant efficiency, especially when exposed to high disc temperatures. These characteristics guarantee an excellent and uniform braking action for the full duration of the race, with less likelihood that fading will occur. Pads of this type provide scant efficiency at lower temperature – a factor of limited importance in racing situations.

- **RC:** track-only compound. This is true racing pad, suitable for any kind of competition on the racetrack. With an excellent friction coefficient and – more especially – exceptional stability at high temperatures, the compound gives constant braking lap after lap, from grid to flag.
- **SC:** sintered compound for track/road use, with high friction coefficient when hot. This is a material that stays very stable in all running conditions, and having a good friction coefficient when cold, the material is also compatible with road use.

RC – SC

Ces plaquettes Racing Brembo sont réalisées dans des matériaux de friction qui se caractérisent principalement par un coefficient de friction élevé et une constance des performances, notamment à des températures élevées. Ces caractéristiques assurent un freinage excellent et constant pendant toute la durée de la course et évite l'effet de 'fading'.

- **RC :** Racing Carbon plaquettes piste uniquement. Véritables plaquettes racing, elle sont réservées à un usage sur piste.

Excellent coefficient de friction à chaud et surtout une stabilité exceptionnelle aux hautes températures, ces plaquettes garantissent un freinage constant du début à la fin de la compétition.

- **SC :** plaquettes sinters pour une utilisation piste/route, elles offrent un excellent coefficient de frottement à chaud. La matière utilisée pour réaliser ces plaquettes est très stable en toutes conditions d'utilisation. Son bon coefficient de friction à froid rend possible son utilisation route.

D RC - SC

Die Bremsbeläge wurden entwickelt, um Piloten außerordentlich hohe Bremsleistungen zu bieten. Die Hauptvorteile dieser Mischung sind der hohe Reibwert und die Bremsstabilität vor allem bei heißen Bremscheiben. Diese Eigenschaften gewährleisten eine exzellente und gleichmäßig hohe Bremsleistung ohne Auftreten des Fadingeffekts. Gegenüber dieser Anforderung tritt die Bedeutung der Bremswirkung bei niedrigen Temperaturen in den Hintergrund.

- **RC:** Mischung ausschließlich für den Raceinsatz. Reiner Racingbelag, ideal für alle Arten von Motorradrennen. Exzellenter Reibwert bei warmgebremsen Bremscheiben und vor allem hervorragende Bremsstabilität bei hohen Betriebstemperaturen garantieren konstante Bremsleistungen über die gesamte Renndistanz.
- **SC:** Sintermischung für Racing/Road-Einsatz, mit hohem Reibwert bei hohen Betriebstemperaturen. Material mit hoher Bremsstabilität unter allen Einsatzbedingungen. Dank gutem Kaltreibwert auch für den Straßeneinsatz geeignet.

Racing - SC

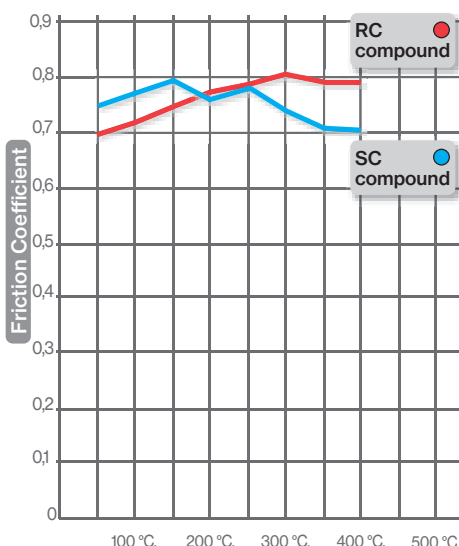

Racing - RC

E RC - SC

Estas pastillas han sido estudiadas para garantizar a sus usuarios prestaciones excepcionales. Las características principales de este tipo de material son su elevado rozamiento y su rendimiento constante, sobre todo cuando el disco alcanza elevadas temperaturas. Estas características garantizan una frenada excelente y uniforme durante toda la competición, reduciendo el riesgo de fading. Por ello, la eficiencia a baja temperatura es menos importante.

- **RC:** compuesto para pista. Es una auténtica pastilla racing adecuada para todo tipo de competiciones en pista. Excelente coeficiente de fricción en caliente y sobre todo excepcional estabilidad a altas temperaturas, lo que permite mantener una frenada constante desde la primera hasta la última vuelta.
- **SC:** compuesto Sinterizado para uso en pista y carretera, con elevado coeficiente de fricción en caliente. Material muy estable en cualquier condición de uso. Su buen coeficiente de fricción en frío permite utilizar este material también en carretera.

RACING

ROAD COMPOUND

SA – Carbon-Ceramico – SP

Sono caratterizzate da un elevato coefficiente d'attrito costante in tutte le condizioni d'utilizzo, quindi sia a freddo che a caldo unitamente ad un'usura contenuta che garantisce durata e percorrenza kilomtrica adeguata.

- **SA:** miscola sinterizzata specifica per applicazione anteriore, caratterizzata da una buonissima efficienza in tutte le condizioni d'utilizzo. Ottima alternativa alle pastiglie originali.
- **Carbon-Ceramico:** è l'evoluzione della miscola organica, con l'impiego di maggior quantità di carbonio. Elevata percorrenza Kilometrica, buone prestazioni sia a caldo che a freddo, asciutto e bagnato, caratterizzano questo materiale d'attrito.
- **SP:** miscola sinterizzata specifica per applicazione posteriore, stabile in tutte le condizioni d'utilizzo.

SA – Carbon-Ceramic – SP

These are characterized by a high friction coefficient that stays constant whatever the operating conditions – in heat and cold alike – as well as resisting wear, for superior durability and better mileage.

- **SA:** a sintered compound intended specifically for front brakes, typified by particularly good efficiency under all operating conditions. An ideal alternative to OE pads.
- **Carbon-Ceramic:** the evolution of the organic compound, featuring a higher carbon content. This friction material offers increased mileage, and good performance in all conditions: heat and cold, wet and dry.
- **SP:** a sintered compound intended specifically for rear brakes, stable in all operating conditions

SA – Carbon-Ceramic Organic – SP

Ces matériaux se caractérisent par un coefficient de friction élevé et constant, en toutes conditions d'utilisation, aussi bien à froid qu'à des températures élevées, et par une usure modérée qui garantit une bonne longévité, notamment en termes de distances parcourues.

- **SA :** matériel SINTER AVANT spécifique pour plaquettes de frein avant; ces plaquettes sont caractérisées par une efficacité en toutes conditions d'utilisation. Excellente alternative aux plaquettes d'origine.
- **Carbon-Ceramic Organic :** il s'agit de l'évolution de la plaquette organique; ces plaquettes sont réalisées avec une plus grande quantité de carbone. Ce matériel se caractérise par sa longévité, sa polyvalence (terrain sec ou mouillé) et ses bonnes

performances à froid comme à chaud. Ce type de plaquette est compatible avec des disques en fonte ou acier.

- **SP :** matériel SINTER ARRIERE spécifique pour plaquettes de frein arrière, stable en toutes conditions d'utilisation.

Road - SA

Road - **SP**

D SA – Carbon-Keramik – SP

Mischungen, die einen konstant hohen Reibwert unter allen Einsatzbedingungen, also sowohl bei niedrigen wie hohen Betriebstemperaturen, zusammen mit geringem Verschleiß, langer Lebensdauer und angemessener Kilometerleistung aufweisen.

- **SA:** sintermischung spezifisch für die Vorderradbremse, zeichnet sich durch hervorragende Effizienz unter allen Einsatzbedingungen aus. Optimale Alternative zu den Original-Bremsbelägen.
- **Carbon-Keramik:** evolution der organischen Mischung mit höherem Carbonanteil. Hohe Kilometerleistung, gute Bremsleistungen sowohl bei hohen als auch niedrigen Betriebstemperaturen, auf trockener wie auf nasser Straße, zeichnen dieses Reibmaterial aus.
- **SP:** sintermischung, spezifisch für die Hinterradbremse, konstante Bremsleistung unter allen Einsatzbedingungen.

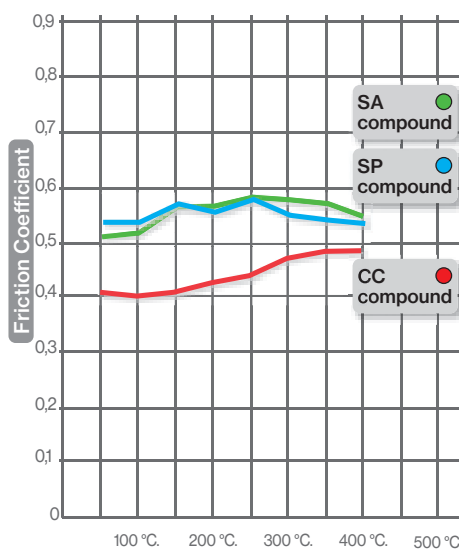

Road - **Carbon Ceramico**

E SA – Carbon-cerámico – SP

Se caracterizan por su elevado coeficiente de fricción constante en cualquier condición de utilización, es decir, en frío o caliente, junto con un desgaste reducido que garantiza duración y kilometrajes adecuados.

- **SA:** compuesto sinterizado específico para aplicaciones delanteras, caracterizado por su excelente eficiencia en cualquier condición de utilización. Óptima alternativa a las pastillas originales.
- **Carbon-Ceramic:** es la evolución del compuesto orgánico y contiene una mayor cantidad de carbono. Elevado kilometraje y buenas prestaciones tanto en frío como en caliente, en seco o mojado, caracterizan este material de rozamiento.
- **SP:** específico para aplicaciones traseras, estable en cualquier condición de utilización.

ROAD

OFF-ROAD COMPOUND

SX – SD – TT

Sono materiali studiati per garantire la massima efficienza nelle svariate condizioni d'utilizzo della motocicletta in fuoristrada, quindi a freddo, a caldo ed in condizioni particolari (acqua, sabbia, fango) che richiedono frenate anche a temperature basse del disco. Per tale motivo è particolarmente importante la resistenza del materiale agli agenti esterni.

- **SX:** sinterizzato Off-Road e Supermotard. Pastiglia molto aggressiva e resistente alle alte temperature, consigliata quindi per Motocross e Supermotard. Molto costante nelle prestazioni.
- **SD:** sinterizzato Off-Road Buona efficienza e stabilità in tutte le condizioni d'uso. Buona resistenza all'usura anche in presenza di acqua e fango. Meno aggressiva rispetto alla SX, quindi più modulabile.
- **TT:** materiale Carbon Ceramico Semimetallico, indicato anche per l'utilizzo Off-Road: materiale molto modulabile è formulato per lavorare sia con asciutto che con bagnato. Particolarmente efficace in situazioni di scarsa aderenza, dove è necessaria un'alta modulabilità.

SX – SD – TT

These materials are designed to guarantee maximum efficiency under the various conditions encountered habitually in off-road riding – not only cold and heat, but inhospitable terrain as well (water, sand, mud), where braking at low temperatures is also a key requirement. With this in mind, resistance of the material to weathering agents is particularly important.

- **SX:** sintered Off-Road and Supermotard. A notably aggressive pad able to withstand high temperatures, recommended for Motocross and Supermotard. Particularly steady performance.
- **SD:** sintered Off-Road. Good efficiency and stability under all operating conditions. Suitably resistant to wear, even when exposed to water and mud. Less aggressive than the SX, giving more flexible control.
- **TT:** Carbon Ceramic, Semi-metallic, suitable for Off-Road use: Advantageously controllable material, formulated to perform well in both dry and wet conditions. Especially effective in situations characterized by poor grip, where flexible response is needed.

SX – SD – TT

Ce sont des matériaux étudiés pour garantir une efficacité maximale en utilisation TT là où les différentes conditions de fonctionnement (chaud, froid, eau, sable, boue, etc...) exigent aussi des freinages lorsque les disques sont froids. C'est la raison pour laquelle la résistance du matériel de friction aux agents externes est particulièrement importante.

- **SX :** plaquette Off Road Racing à fort coefficient de friction, elle répond à une demande de grosses performances et offre un freinage agressif. Elle est étudiée pour résister aux températures élevées. Idéale pour le Supermotard et le Supercross

- **SD :** matériel de friction semi métal RACING Off Road et Supermotard. Plaquettes très agressives et résistantes aux hautes températures; elles sont préconisées pour Motocross et Supermotard. Performances constantes.
- **TT :** matériau Carbon-Ceramic semi-métallique, ces plaquettes sont préconisées pour une utilisation Off-Road: le matériel de friction utilisé pour réaliser ces plaquettes est très modulable et a été formulé pour être utilisé tant sur le mouillé que sur le sec. Particulièrement efficace en toutes situations de faible adhérence, là où une haute modulabilité est nécessaire.

D SX – SD – TT

Diese Materialien wurden entwickelt, um maximale Effizienz bei wechselnden Einsatzbedingungen im Gelände zu garantieren, also bei niedrigen wie bei hohen Betriebstemperaturen sowie unter besonderen Einsatzbedingungen (Wasser, Sand, Schlamm), wenn häufig mit kalten Bremsscheiben gebremst wird. Daher muss das Material gegenüber äußeren Einflüssen besonders resistent sein.

- **SX:** sinter Off-Road und Supermotard. Sehr aggressiver und temperaturresistenter Belag, empfohlen für Motocross und Supermotard. Bietet konstant hohe Bremsleistungen.
- **SD:** sinter Off-Road. Gute Bremswirkung und Stabilität unter allen Einsatzbedingungen. Hohe Verschleißfestigkeit auch bei Einsatz im Schlamm. Weniger aggressiv als SX, daher besser dosierbar.
- **TT:** TT-Carbon-Keramik mit Metallanteilen, auch für den Off-Road-Einsatz geeignet: Material mit hervorragenden Dosiereigenschaften, gleichermaßen für Trocken- und Nasseinsatz konzipiert. Besonders effizient in Situationen mit schlechter Bodenhaftung, wo es auf eine gute Dosierbarkeit ankommt

Off Road - TT

Off Road - SX

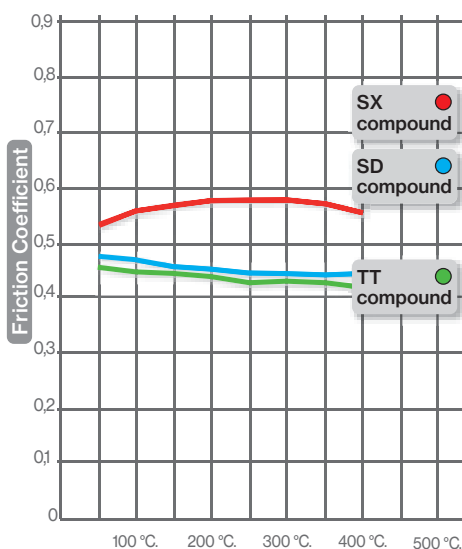

Off Road - SD

E SX – SD – TT

Son materiales estudiados para garantizar máxima eficiencia en las distintas condiciones en que se utilizan las motos de motocross, es decir, en frío, en caliente o en condiciones particulares (agua, arena, barro) que precisan frenadas a baja temperatura del disco. Por ello, es muy importante la resistencia del material a los agentes externos.

- **SX:** sinterizado Off-Road y Supermotard. Pastilla muy agresiva y resistente a las altas temperaturas, ideal para Motocross y Supermotard. Muy constante en las prestaciones.
- **SD:** sinterizado Off-Road. Buena eficiencia y estabilidad en cualquier condición de utilización. Buena resistencia al desgaste incluso en presencia de agua y barro. Menos agresiva que la SX, y por tanto más modulable.
- **TT:** material Carbon-cerámico Semimetálico, ideal para motocross: Material muy modulable formulado para trabajar tanto en seco como en mojado. Particularmente eficaz en situaciones de poca adherencia, donde se requiere elevada modulabilidad.

OFF-ROAD

SCOOTER COMPOUND

I XS – Carbon Ceramico

Garantiscono lunghe percorrenze e stabilità d'uso in tutte le condizioni d'utilizzo. Sono studiate specificatamente per questa tipologia di veicoli, l'uso in città e la frenata tipica, diversa da quella di una moto (l'uso in città e la frenata tipica).

- **XS:** mescola sinterizzata, specifica per applicazioni scooter, sia anteriore che posteriore. E' un materiale estremamente stabile, garantisce costanza di prestazioni in tutte le situazioni di guida. È il materiale ideale per i maxi scooter di ultima generazione.
- **Carbon Ceramico:** ottimo rapporto qualità/prezzo per questa mescola organica Scooter. Elevata durata e comportamento ottimale in tutte le condizioni che caratterizzano l'utilizzo di questa pastiglia.

UK XS – Carbon Ceramic

These pads guarantee high mileage and stability of use in all riding conditions. Designed especially for scooters, the compound is formulated for street use, and gives a braking action different to that of a motorcycle.

- **XS:** sintered compound, intended specifically for scooter brakes, both front and rear. An extremely stable material, this compound guarantees steady performance in all riding situations. Ideal for maxi scooters of the latest generation.
- **Carbon Ceramic:** an organic brake pad for scooters, offering an optimum quality/price ratio. This is a component characterized by durability and optimum behaviour under all conditions.

F XS – Carbon-Ceramic organic scooter

Elles ont été conçues spécifiquement pour les scooters. Leur matériel de friction est étudié pour un usage urbain garantissant un long kilométrage et une stabilité d'utilisation en toutes conditions d'utilisation.

- **XS :** plaquettes sinters scoot; ices plaquettes de frein spécial scooters sont préconisées pour freins avant ou arrière. Ces plaquettes garantissent un fonctionnement stable et des performances constantes en toutes conditions de conduite. Le coefficient de friction élevé en fait l'équipement idéal pour les véhicules puissants de nouvelle génération (maxi scooter).
- **Carbon Ceramic :** an organic brake pad for scooters, offering an optimum quality/price ratio. This is a component characterized by durability and optimum behaviour under all conditions.

Scooter - Carbon Ceramico

D

XS – Carbon-Keramic

Gewährleisten hohe Kilometerleistungen und Bremsstabilität unter allen Einsatzbedingungen. Sie wurde speziell für diesen Fahrzeugtyp, seine Verwendung (in der Stadt) und typischen Bremsmanöver entwickelt, die sich von denen von Motorrädern unterscheiden.

- **XS:** intermischung, spezifisch für Scooter, an Vorder- und Hinterradbremse einsetzbar. Dieses Material ist äußerst stabil und bietet konstante Bremsleistungen in allen Fahrsituationen. Es ist das ideale Material für die Maxiscooter der jüngsten Generation.
- **Carbon-Keramik:** diese organische Mischung für Scooter weist ein optimales Preis-/Leistungsverhältnis auf. Lange Lebensdauer und optimales Verhalten unter allen Einsatzbedingungen zeichnen diesen Bremsbelag aus.

Scooter - XS

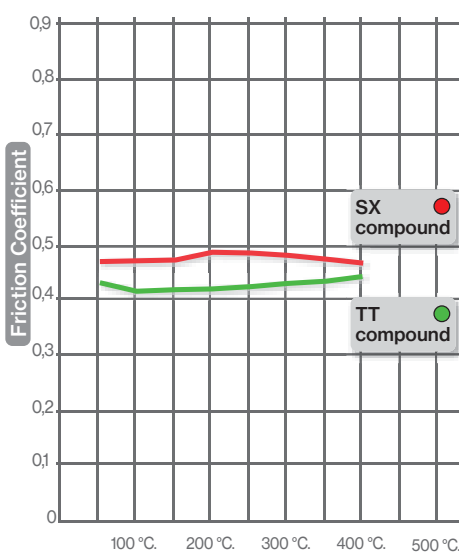

E

XS – Carbon-cerámico

Garantizan elevados kilometrajes y estabilidad en cualquier condición de utilización. Han sido estudiadas específicamente para este tipo de vehículos, cuyo uso (en ciudad) y frenada típica se diferencian de los de una moto.

- **XS:** compuesto sinterizado, Óptima relación calidad/precio para este compuesto orgánico Scooter. Elevada duración y óptimo comportamiento en todas las condiciones que caracterizan la utilización de esta pastilla.
- **Carbon-cerámico:** óptima relación calidad/precio para este compuesto orgánico Scooter. Elevada duración y óptimo comportamiento en todas las condiciones que caracterizan la utilización de esta pastilla.

SCOOTER

GENUINE COMPOUND

I È il ricambio originale per le pinze Brembo. Acquistando queste pastiglie avrete esattamente lo stesso materiale scelto dal costruttore della moto e sviluppato per la specifica applicazione, secondo i più severi criteri. Possono essere in materiale sinterizzato oppure Carbon Ceramico.

UK The original replacement part for Brembo calipers. Selecting these pads, you buy exactly the same OE material as used by the motorcycle manufacturer and developed for the particular application, according to the most stringent criteria. Pads can be of sintered or Carbon Ceramic material.

F Ce sont les pièces de rechange d'origine pour les étriers Brembo. En achetant ces plaquettes, vous vous procurerez donc exactement le même matériau choisi par le constructeur de la moto et développé pour l'utilisation spécifique, selon les critères les plus sévères. Elles peuvent être réalisées en matériel de friction sinterisé ou en matériel Organic Carbon-Ceramic.

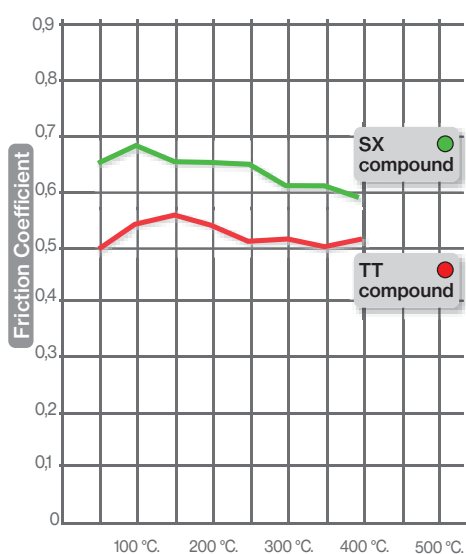

D Originalbelag für Brembo Bremssättel. Das Material dieses Bremsbelags entspricht exakt dem Material, das die Motorradhersteller für die Erstausrüstung verwenden und wurde speziell für den jeweiligen Anwendungsbereich unter Erfüllung strengster Anforderungen entwickelt. Die Beläge können aus Sintermetall oder Carbon-Keramic bestehen.

E Es el recambio original para las pinzas Brembo. Comprando estas pastillas dispondrá del material elegido por el fabricante de la moto y desarrollado para la aplicación específica, según los criterios más estrictos. Pueden ser de material sinterizado o Carbon-cerámico.

Genuine - **Carbon Ceramico**

GENUINE

Genuine- Sinter

A black and white photograph of four motorcyclists riding on a winding road. The lead motorcyclist is in the foreground, leaning into a turn. The road is bordered by a stone wall on the right and a steep, rocky hillside on the left. The image is partially obscured by a dark grey diagonal overlay on the left side, which contains the text.
